# WEATHER OF CONCERN

## Weather of Concern

- Isolated thunderstorms will be possible across Northwest California this afternoon. Chances for thunderstorms increase Sunday and beyond, with best chances across interior mountains.

## **Active Weather Warnings, Watches and Advisories by County:**

- [http://www.wrh.noaa.gov/sto/brief/www\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php) - Temporarily unavailable.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

\*\*\* Isolated to Scattered thunderstorms with moderate rainfall NW Mountains early today and eastern areas all day \*\*\*

\*\*\* Isolated daily thunderstorms with moderate rainfall northern and eastern areas Sunday through much of next week \*\*\*

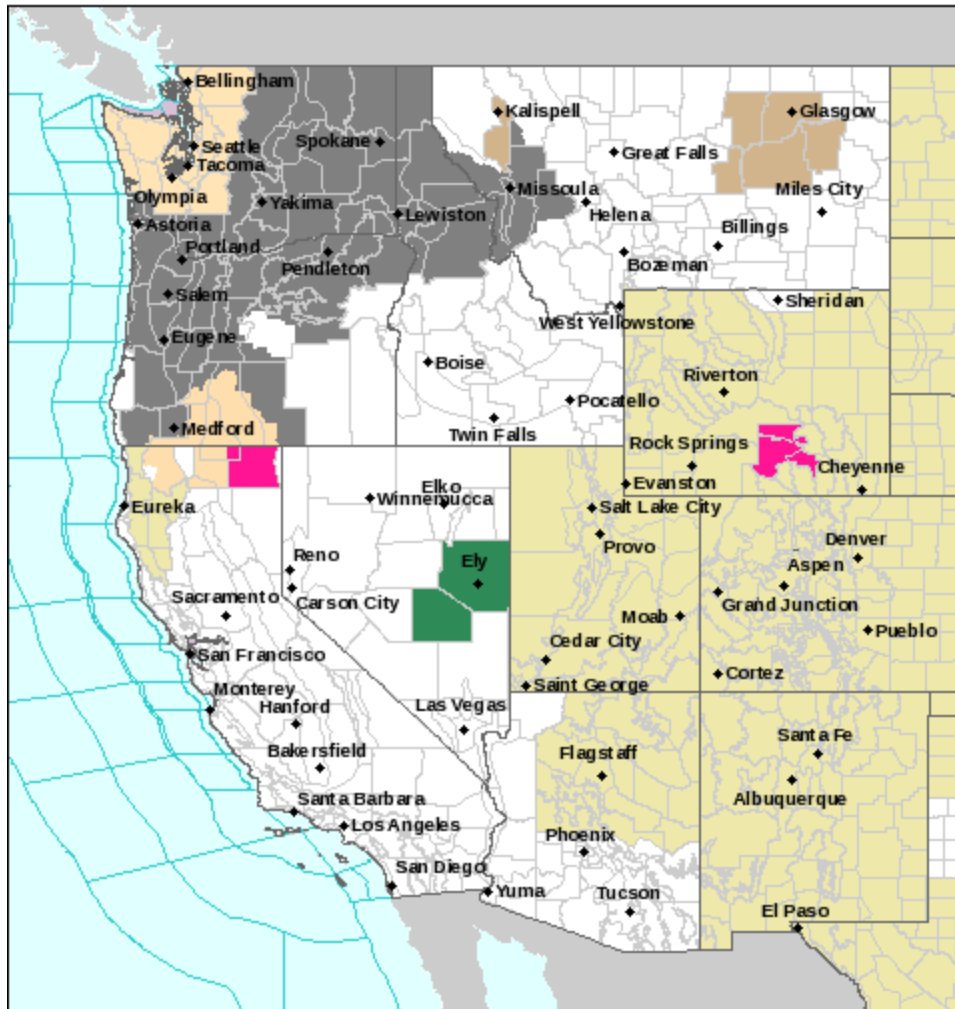

The high pressure ridge that has been over the Northern California region in recent days is weakening, and low pressure off the central CA coast is pulling monsoon moisture into the region. East of the Cascade-Sierra crest will have hot and dry weather before the more humid air mass moves in.

The low will be near the northern CA coast this weekend into the middle of next week then weaken and become a trough late in the week. A few thunderstorms are expected in northwestern areas early today, but eastern areas will see thunderstorm activity all day. Rainfall produced by thunderstorms will be greater today, lowering the potential for significant fire development. A direct hit from a storm on could produce 0.25-0.50 inches of rainfall. Daily wet thunderstorms will continue in northern and eastern areas through much of next week, and the potential for significant fires will remain below high risk criteria due to moderate to heavy rainfall. New fire starts or holdovers and potential for periods of rapid fire spread will continue to be in place, however. Temperatures will be closer to normal for the next week or so.

## **SOUTHERN CALIFORNIA**

Scattered afternoon showers and thunderstorms will continue over the Sierra and across the Northern Deserts through this weekend as moisture continues to push into these areas by a weak area of low pressure off the Northern California Coast. This weak area of low pressure will cool temperatures to near normal through this weekend, with upper 70s and 80s across the mountains and upper 80s and 90s in the valleys. It will still be humid through this weekend, with minimum humidity above 20%. The low will push inland early next week and be replaced by a weak trough, which will keep temperatures near normal through Wednesday. Humidity will become low by Monday, with many teens for minimum humidity. The shower and thunderstorm threat will end across the entire region starting Monday. Westerly afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes through the middle of next week. Strong high pressure will set up over the Desert Southwest and expand westward bringing significant warming to the region late next week.
